

# File Outcome Graph Colours

This palette was designed by experts in colour for data visualization.

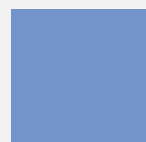

The colours are different enough from each other to be easily recognised in any combination.

Glasswall file outcomes should appear next to these colours where appropriate.

# Graphs (add lenses, beer goggles etc.)

A variety of graphs can be easily made using the Glasswall Excel graph templates.

The design philosophy for Glasswall graphs is, make them simple, clear and readable with honest data representation.

Let the data do the talking!

Graphs Should be centred and surrounded by 'white space' and fill an A4 or US Letter page horizontally to the margins. Graph text is full black for readability against the light grey background.
